Webdesign for everybody capstone: Assignment (week 2)

Wireframe & Sitemap

I'm planning on building an average personal website, containing 4 sub-pages. Including the "Home-page", it will be 5 HTML-pages in total. Each site will be build and styled differently and each site will be optimized for both Full-HD viewport and Mobile view. I will of course also make sure that the viewports in between will be displayed correctly.
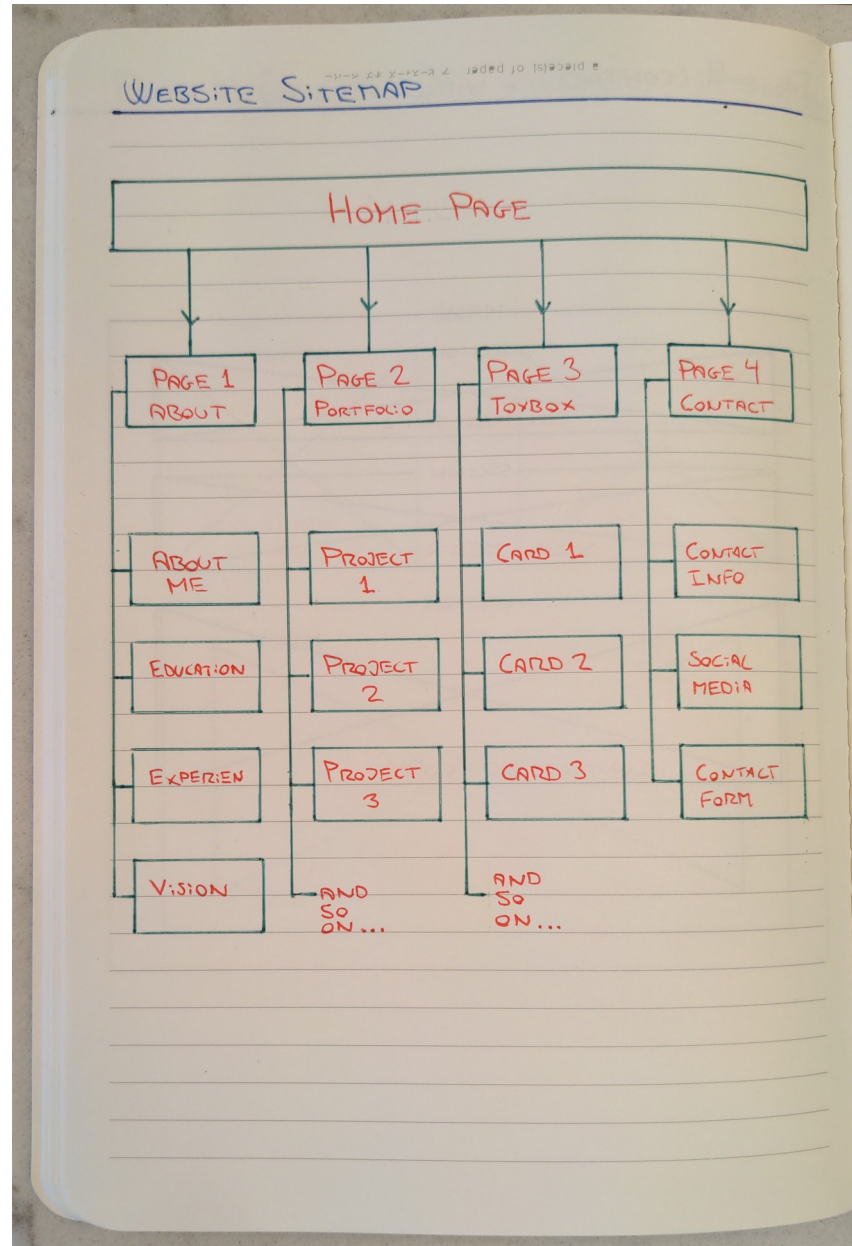

The site will contain the following pages:

- 0 – Homepage (Basic homepage)
- 1 – About (Basic page presenting who I am)
- Portfolio (Basic page presenting projects I have done)
- Toybox (Basic page/showroom displaying programs or random stuff I have build)
- Contact (Basic page with my contact information)

I will try to build everything on my own from scratch, without using any frameworks. I will let frameworks inspire my work though. I am not a creative person; I simply can't see what's pretty and what's not. So I will seek inspiration elsewhere, but build it using my own code.

The following pages in this document, will further display my ideas, Sitemap and Wireframes for my website.
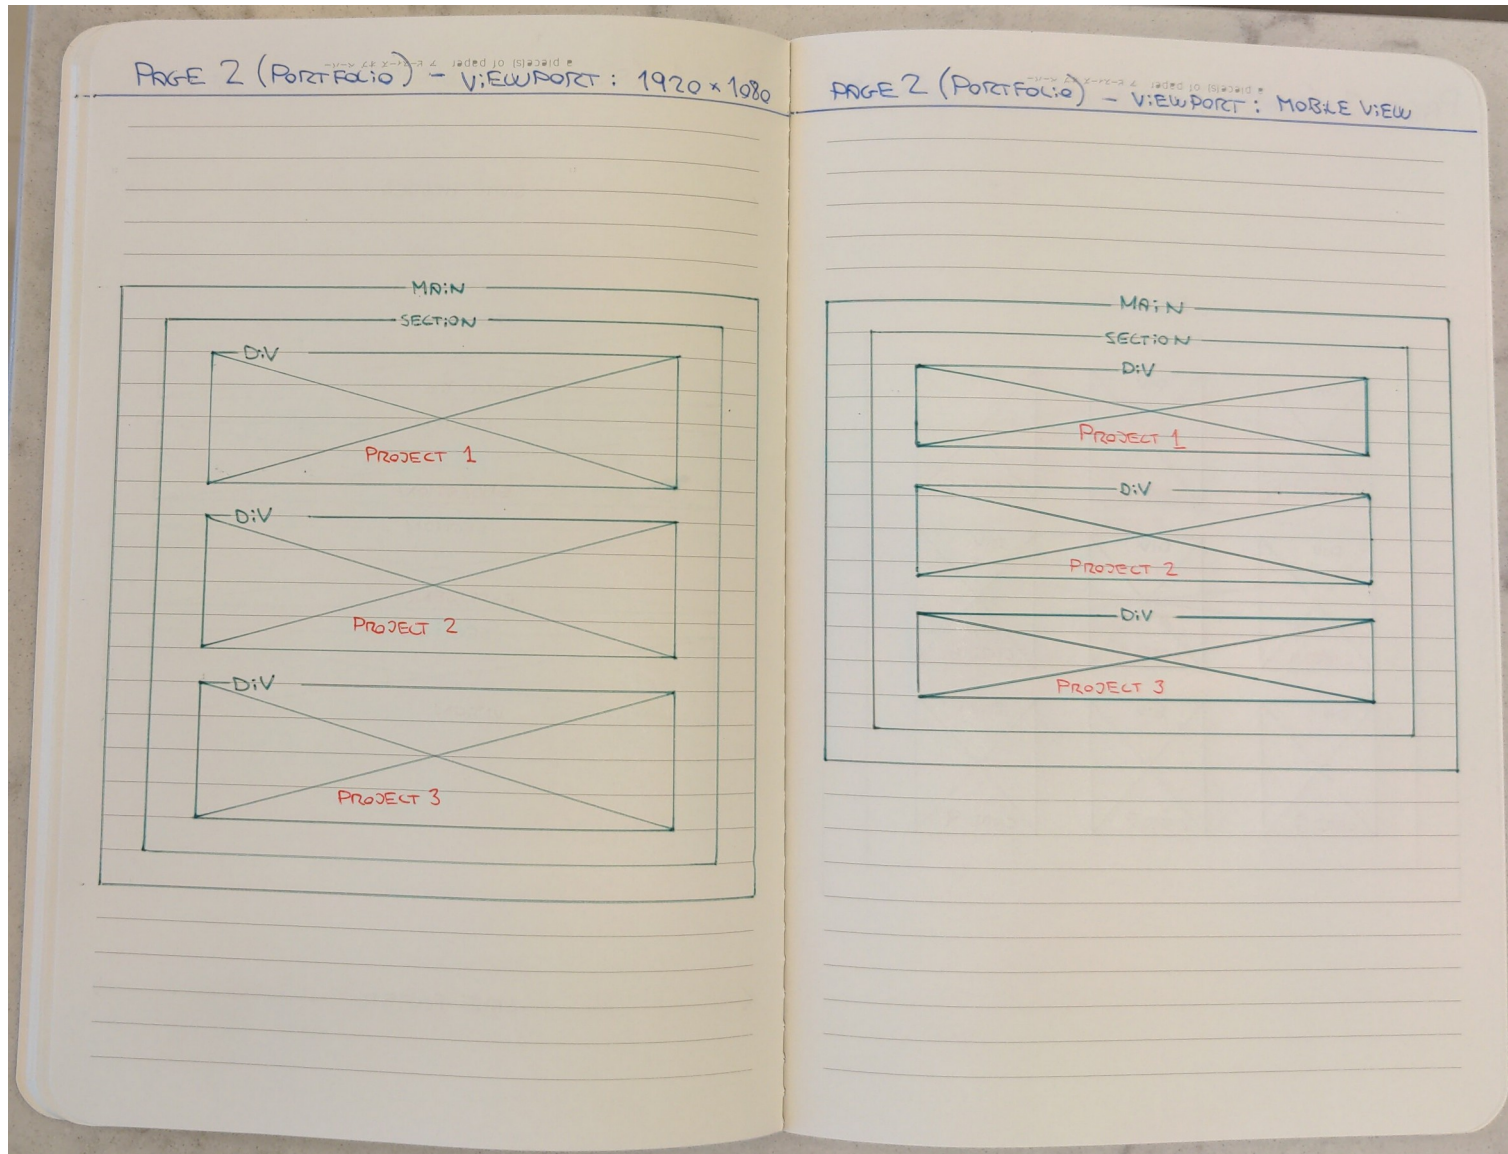

Sitemap

Wireframe – Homepage

Frontpage (Home) – Viewport: 1920 x 1080

HEADER
NAV
TITLE   PAGE 1   PAGE 2   PAGE 3   PAGE 4
